Problem

Household management can be disorganized and household can regularly be unmotivated to get chores done.

Proposed Solution

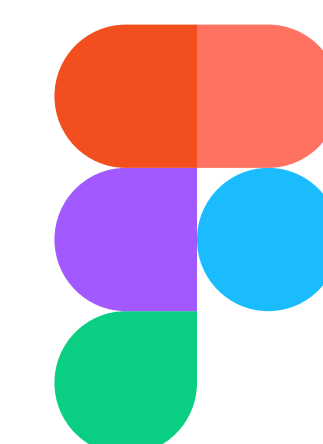

ChoreChamp focuses on helping parents and their families organize and delegate chores. This app will be used to help encourage and correct behaviors using a point system that tracks completed chores.

Development

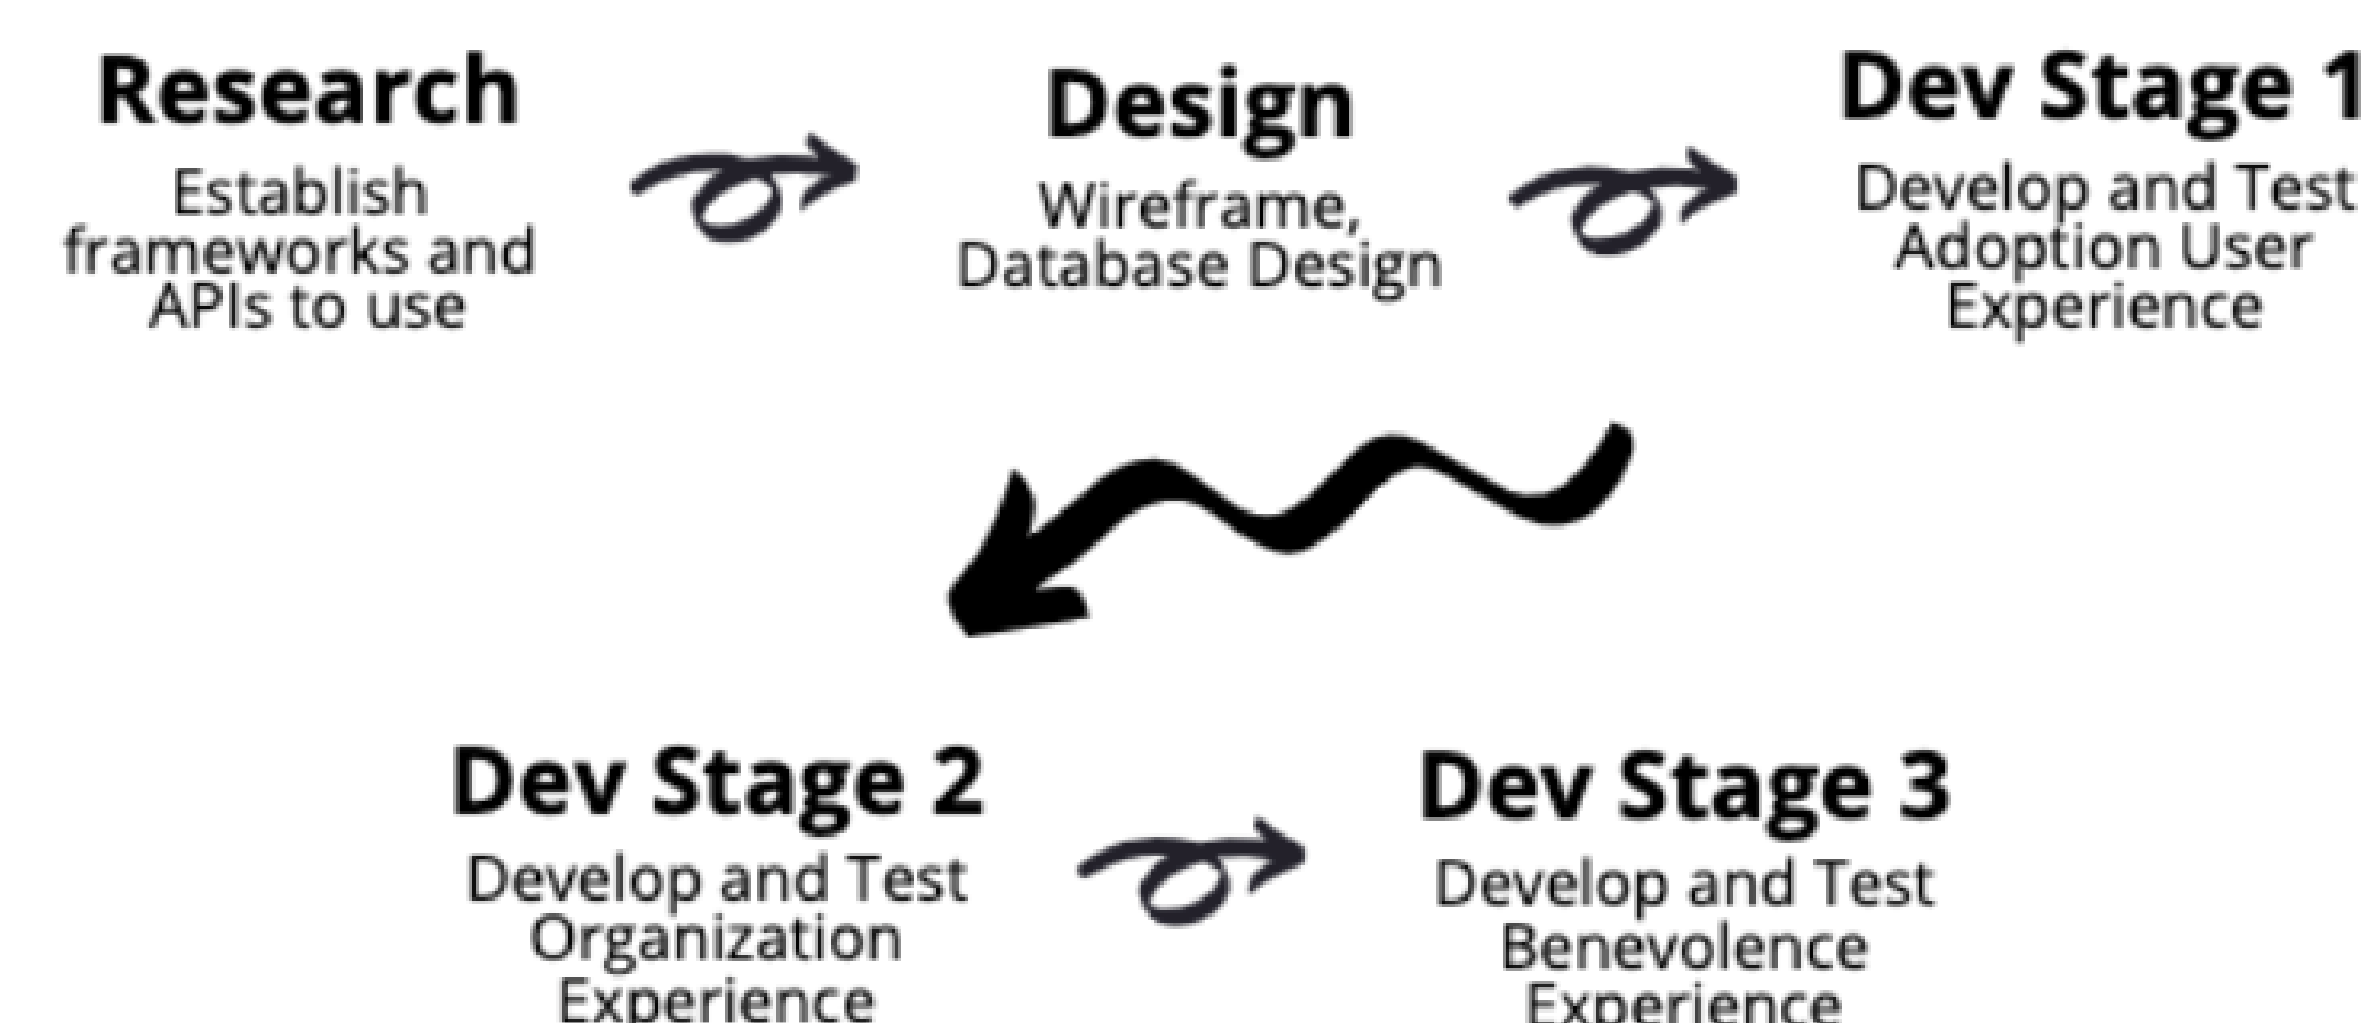

Technologies Used:

Firestore

We followed an agile approach and went through the following stages:

Current State

We have a working prototype for users to create a household, assign tasks, and receive points.

Challenges

Time

We had a lot of features we wanted to add without the necessary time - we had to scale down.

Android Studios

We are all new to the platform so working through errors took longer than expected.

Next Steps

- Add task filtering
- More profile customization
- Amazon Alexa integration for reminders
- Expand to iOS devices
